Plague infected.....	3	.....	.....	2	7	48	16	11	17	9	6	3

Acting Asst. Surg. Ransom reported July 6: Leprosy is endemic in Shanghai. Relapsing fever and hookworm are present.

**CUBA.****The Plague Situation.**

In Cuba there have been in all 3 cases of plague in Habana. The last case was reported on July 22 and the last death July 27. It is therefore a month since any case has developed.

The restrictions placed upon passengers going from Habana to the United States have been removed, excepting as regards persons who have resided in Habana between Cuba Street and the water front. The restrictions on vessels and cargoes directed against the importation into the United States of infected rodents remain unchanged.

The work of trapping and poisoning rats continues, and the rats collected are being examined to ascertain whether plague infection exists among them. From June 24 to August 10, 6,216 rats had been examined in this way without the finding of any infected with plague.
